

Innovation policy's role in helping manufacturing SMEs create and keep a competitive edge.

Experience of Germany

Uwe Cantner

Professor of Economics
Friedrich Schiller University Jena
&

University of Southern Denmark, Odense

**INNOVATION CONFERENCE FOR THE DECISION MAKERS:
ROLE FOR THE GOVERNMENT**

29 November 2017, Tallinn

1. Importance of SMEs for innovation
2. Innovation and obstacles
3. SMEs in Germany - performance
4. SME innovation policies in Germany
5. Innovation over time
6. Policy design and SMEs
7. The New Role of the State - Conclusion

1. IMPORTANCE OF SMEs FOR INNOVATION

- The great importance of SMEs for employment and innovation is often emphasized.
 - Backbone of the German industry
 - Industries that are characterized as specialized suppliers; e.g. machinery, automotive industry suppliers
- SMEs as drivers of newly emerging technologies and industries
 - industry life cycles
 - technology life cycles
- SMEs as initiators of new GPTs
 - techno-econ paradigms, long waves
 - drivers of transformation dynamics

2. SME INNOVATION AND OBSTACLES

Percentage distribution of obstacles to innovation in innovation-active SMEs (5 to 249 employees) in Germany, 2012 to 2014

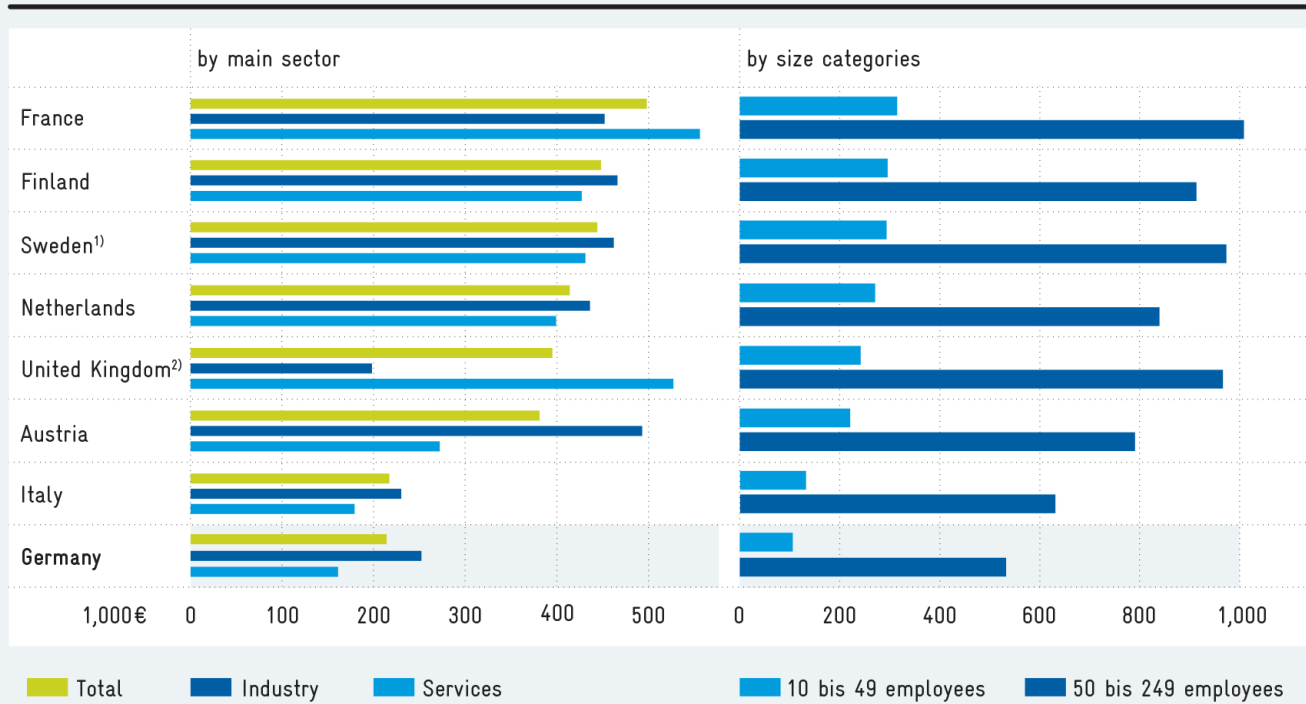

Chart covers obstacles to innovation that have led to delays, the abandonment or the non-implementation of innovation projects.

Source: Mannheim Innovation Panel. Calculations by ZEW in Rammer et al. (2016)

3. SMEs IN GERMANY - PERFORMANCE

¹⁾ only 2008, ²⁾ only 2012.

Source: Eurostat: Community Innovation Survey. Calculations by ZEW in Rammer et al. (2016)

- The innovation intensity and innovation expenditure of German SMEs are, on average, low by international comparison

| Patents | | Innovations | | Revenue | |
|---|-----|--|-----|--|-----|
| Transnational patent applications by SMEs (< 500 employees) per million inhabitants | | Percentage of SMEs (10 to 249 employees) with product or process innovations | | Product innovations' share of turnover of SMEs (10 to 249 employees) | |
| Sweden | 137 | Germany | 42% | United Kingdom | 18% |
| Finland | 132 | Netherlands | 41% | France | 8% |
| Austria | 104 | Finland | 40% | Italy | 8% |
| Germany | 87 | Sweden | 40% | Netherlands | 7% |
| Netherlands | 82 | Italy | 39% | Germany | 6% |
| United Kingdom | 50 | Austria | 36% | Austria | 6% |
| France | 45 | France | 32% | Finland | 5% |
| Italy | 44 | United Kingdom | 28% | Sweden | 5% |

Source: EPA: Patstat, Eurostat: Community Innovation Surveys. Calculations by Fraunhofer ISI and ZEW in Rammer et al. (2016).

- Patent activities and innovation successes reveal a mixed picture

4. SME PROGRAMS IN GERMANY

Direct funding: most recent available year = 2013, 2012 or 2011, depending on the country. Indirect funding: mean of indirect funding in 2012 and 2013.

Source: OECD: Research and Development Statistics, Main Science and Technology Indicators. Calculations by ZEW in Rammer et al. (2016).

- In reference countries with R&D tax credits, the percentage of publicly financed R&D expenditure by SMEs is significantly higher than in Germany

| | Technology-open BMWi measures benefiting SMEs (IGF, INNO-KOM- Ost)* | ZIM | KMU-innovativ | Specialised programmes of the Federal Gov. |
|--|---|--|--|--|
| Target group | Research institutions or not-for-profit external industry research institutions (economically active SMEs benefit indirectly by using research results) | SMEs according to EU definition (higher headcount threshold: < 500 employees) | SMEs according to EU definition (in individual technology fields: extension to up to 1,000 em- ployees and turnover of €100 million per year) | open (EU definition of SMEs sets framework for funding quotas) |
| Funding limit | none (IGF) €500,000 (INNO-KOM-Ost) | €209,000 (max. eligible costs: €380,000) | none | none |
| Number of newly funded projects per year (annual approvals, average figures for 2013-2015) | approx. 420 (IGF) approx. 220 (INNO-KOM-Ost) | approx. 2,900 (only SME projects, total approx. 4,300 projects, i.e. approx. 1,400 sub-projects of cooperating research institutions) | approx. 280 (only SME projects; total of approx. 500 projects – i.e. about 220 sub-projects of the R&D partners, usually research institutions) | approx. 2,600 (only SME projects; total of over 13,000 projects) |
| Funding paid out for or to SMEs per year (average figures for 2013-2015) | approx. €140m (IGF) approx. €60m (INNO-KOM-Ost) | approx. €320m (plus funds to cooperating research institutions: approx. €190m) | approx. €60m (plus funds to R&D partners in the projects, usually research institutions: €50m) | approx. €480m (EU definition; incl. KMU- innovativ, only funds that go direct to SMEs; funding to R&D partners used for research services for the benefit of SMEs cannot be shown separately) |

* Other BMWi programmes benefiting SMEs – such as the ERP Innovation Programme, go-Inno innovation vouchers, the SIGNO or WIPANO programme, the High-Tech Gründerfonds and the EXIST programme – are not included in the calculation here because of their different approaches to funding.

Source: Written information from BMBF and BMWi.

5. INNOVATION OVER TIME

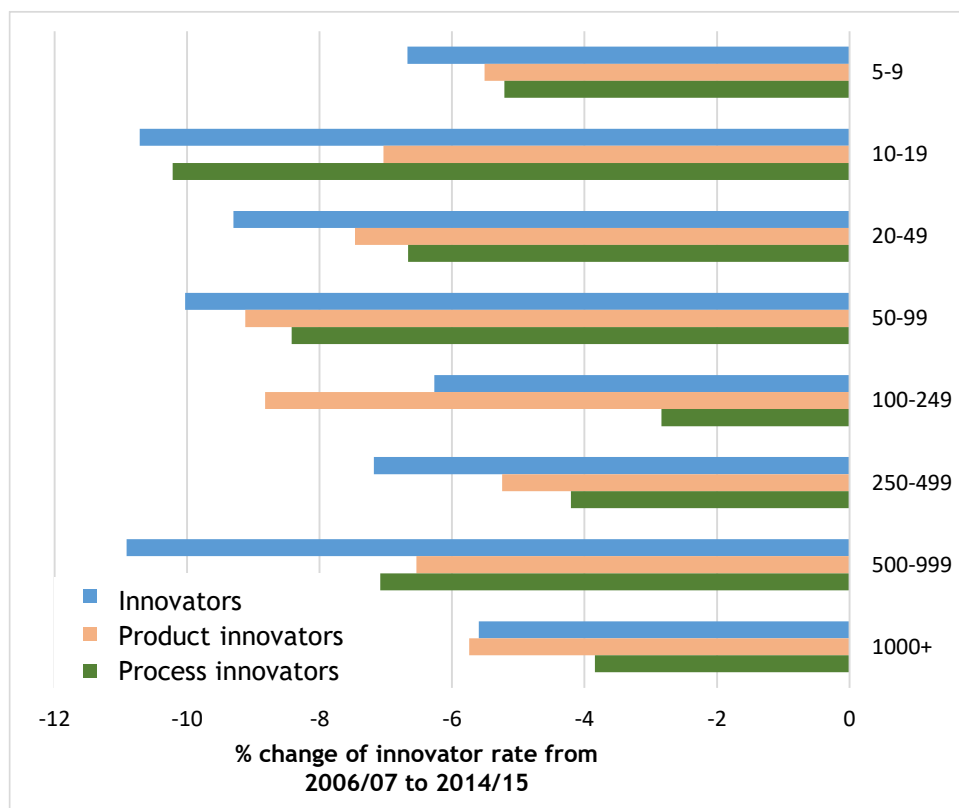

- **Germany**
- Declining innovation activities in Germany
- Clear decline already before 2008
- and also after 2008 despite
 - prosperous economic development
 - easy credit conditions

Share of innovative firms in all firms in %

(MIP various years)

Change in innovator rates 2006/07 to 2014/15 by size class and type of innovation in Germany (Basis National Statistics)

(Source: ZEW 2018)

Innovation versus Imitation (product innovation)

(Source: Cantner (2016), MIP several years)

- Growth rate of TFP as indicator of technological change
- A slightly negative development (less for US and D)
- Drop in the aftermath of the 2008 financial crisis
- Slowdown of technological change?

(OECD)

$$\frac{\Delta TFP_t / TFP_t}{R_t}$$

- Bloom et al 2017
- International
- Declining research productivity
- US rather constant

United Kingdom 1987-2014

Germany 1987-2014

France 1987-2014

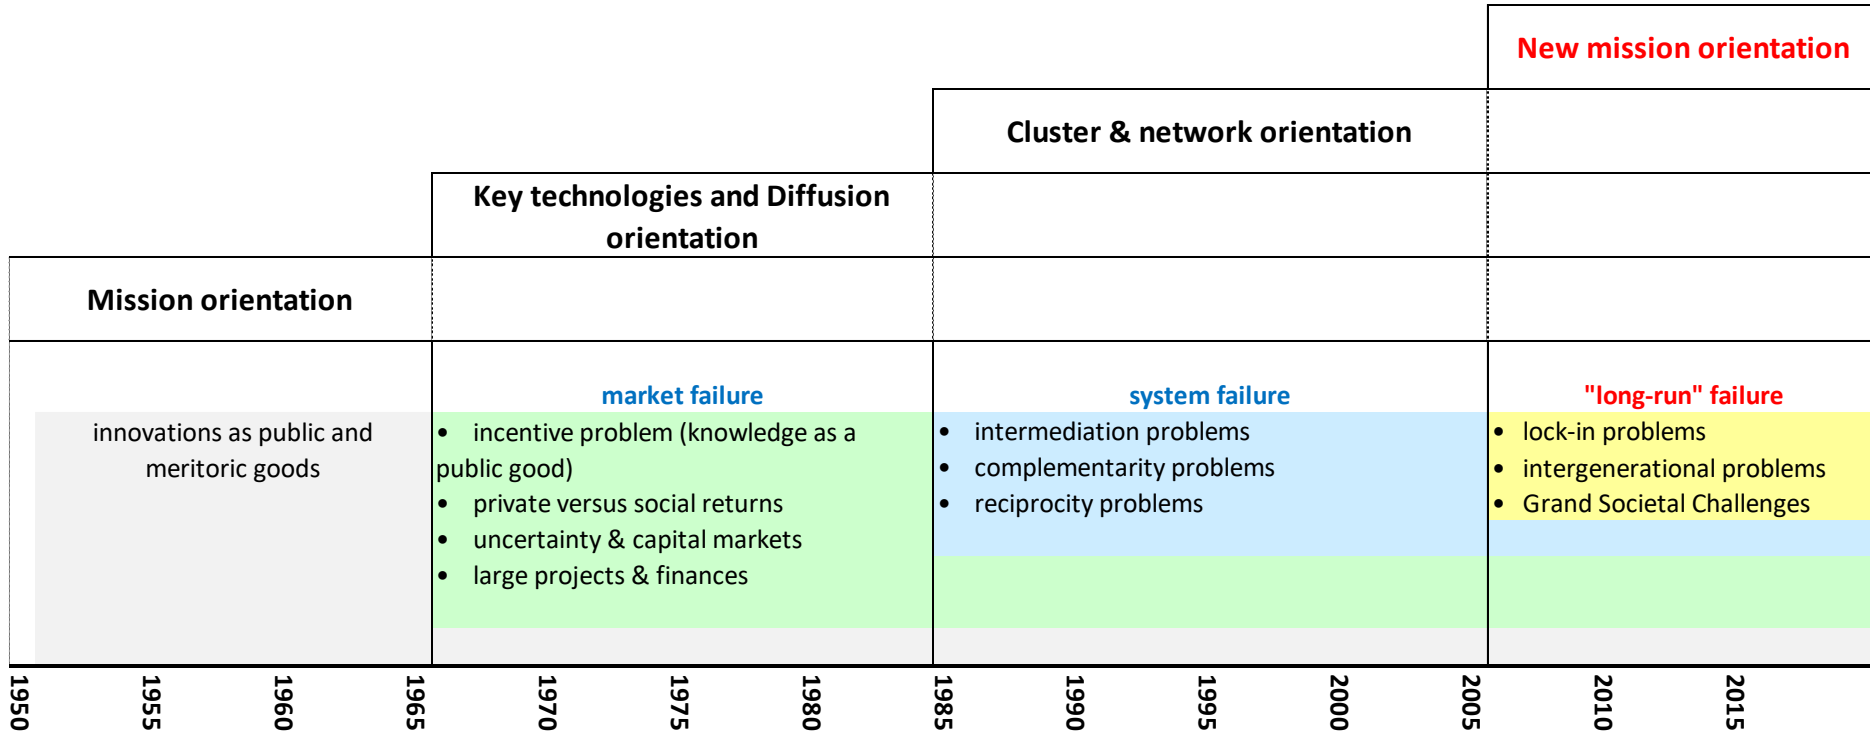

United States 1987-2007

(Cantner, Prytkova, Vannuccini 2017)

6. POLICY DESIGN AND SMEs

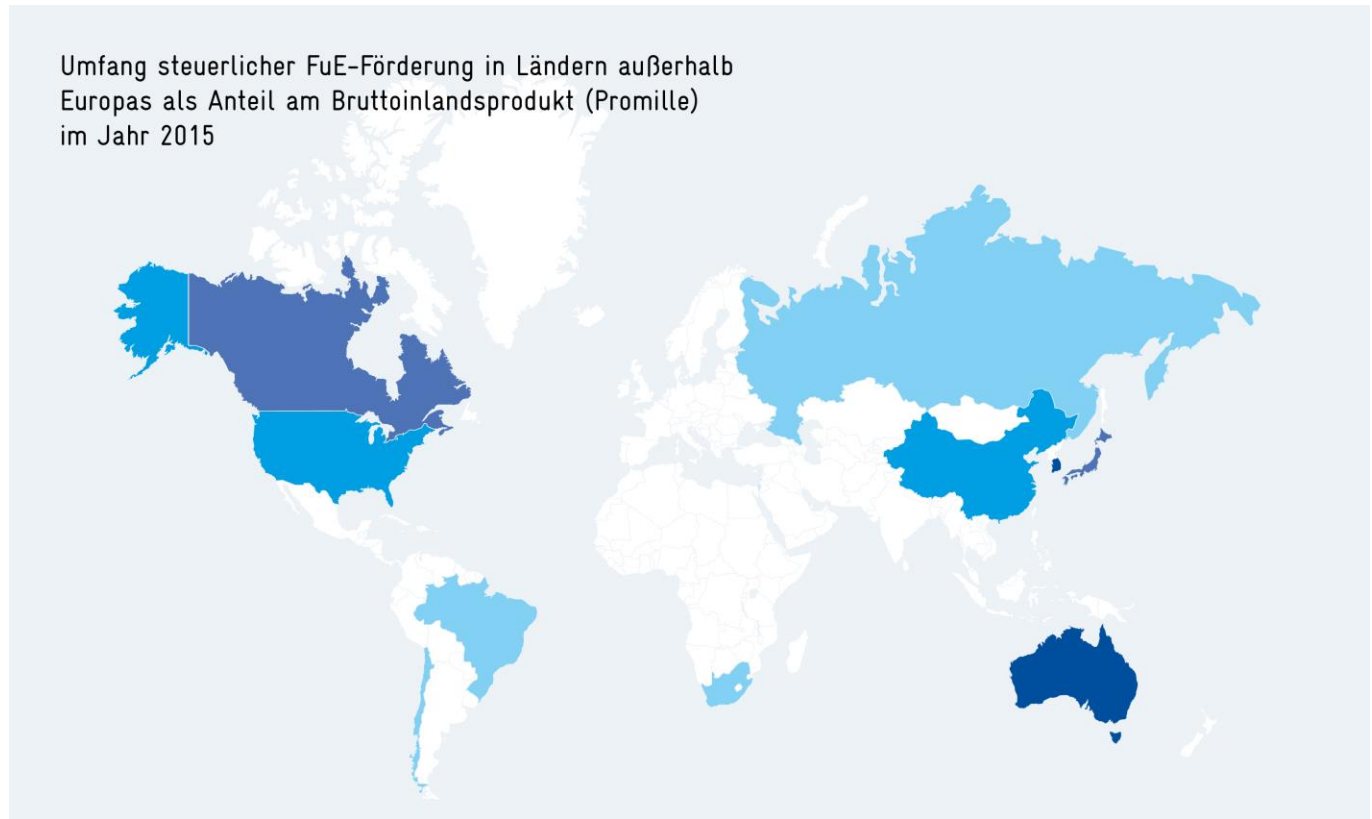

From explicitly addressing a **specific technological solution** (*mission* such as nuclear power) toward emphasizing a **broader range of problem solution** (*new mission* policy such as renewable energies)

Own elaboration based on Fier and Harhoff (2003)

- **Suggested Catalytic Policy Concept** (Cantner and Vanuccini 2016)
- **Direct policy measures** to induce directional change
 - New mission policy (to be distinguished from traditional mission policy)
 - Open corridors and allow firms to select
 - In Germany: High-tech Strategy and Grand Societal Challenges
- **Mobilization** of innovators and innovative imitators into the selected directions
 - R&D tax credit
- **Drivers of directional change** are SMEs and newly founded firms
 - Address policy dimensions explicitly to this group

R&D tax credits
worldwide w/o
Europe

Umfang steuerlicher FuE-Förderung in Ländern außerhalb Europas als Anteil am Bruttoinlandsprodukt (Promille) im Jahr 2015

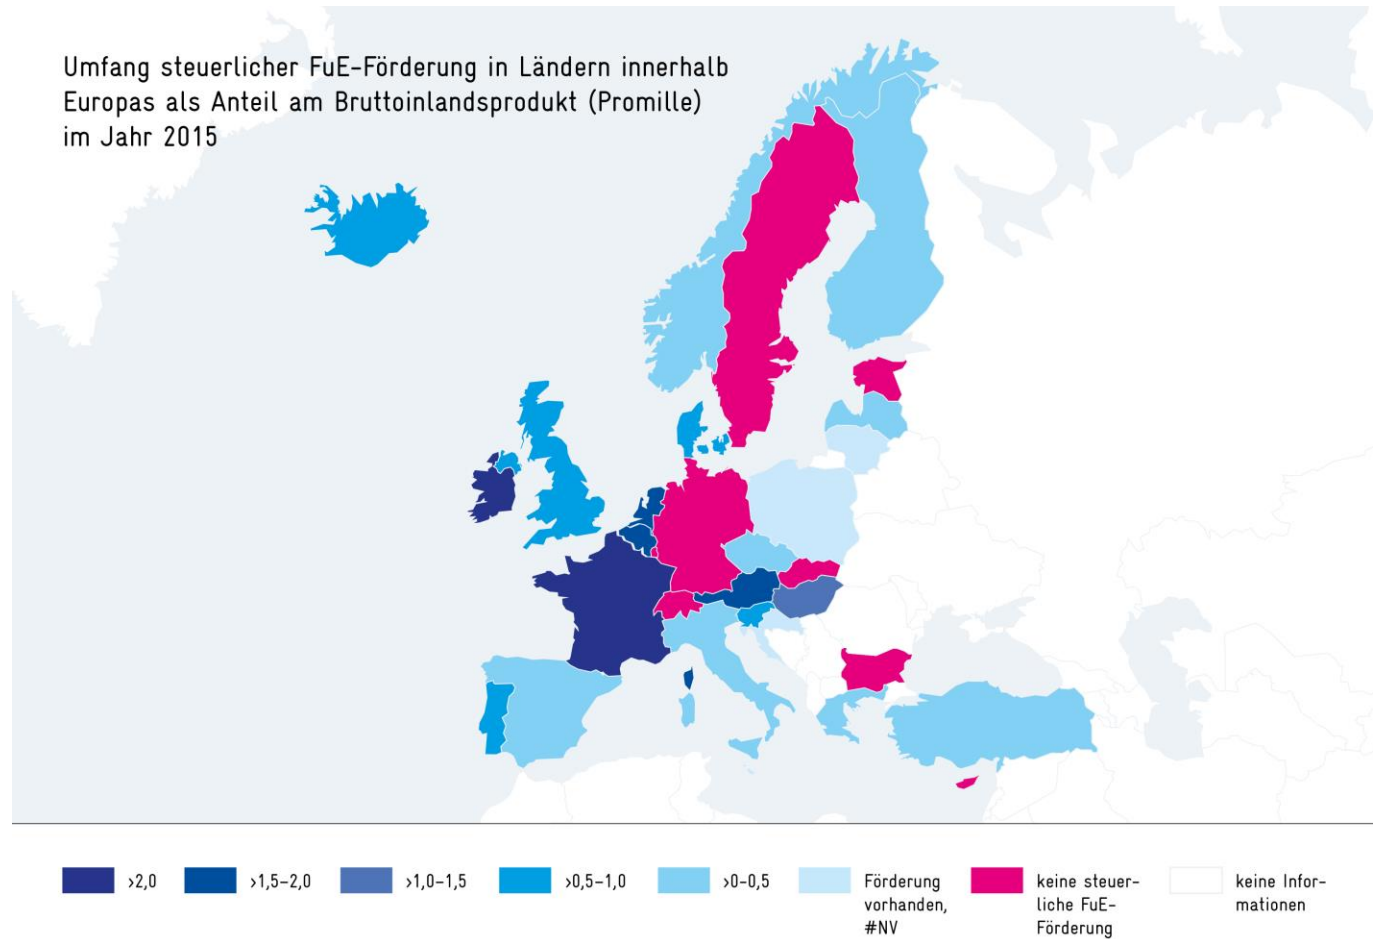

Quelle: EFI 2017

R&D tax credit in Europe

Umfang steuerlicher FuE-Förderung in Ländern innerhalb Europas als Anteil am Bruttoinlandsprodukt (Promille) im Jahr 2015

Quelle: EFI 2017

- R&D tax credit with a focus on SMEs:
 - Easy to apply for and low level of application burden
 - Reduction of financial risks and uncertainty related to innovation
 - Reduction of R&D costs leads to more than proportional increase in R&D expenditures
- Alternatives:
 - Alternative 1: tax credit for all R&D expenditures in the context of firm income taxation
 - Alternative 2: tax credit for all R&D expenditures for R&D staff and monthly clearing with tax on wages
- Alternative 2 exhibits a higher ability to plan and larger positive liquidity effects

7. THE NEW ROLE OF THE STATE - CONCLUSION

**THANK YOU FOR YOUR
KIND ATTENTION**
