$1 \leq M \leq S$

Page. 42, line 13

$PV = (ballot + pool + votes) * \ln(M + 1)$=(1+0+1)*ln(1+1)=2*ln(2)=1.386

Page. 42, Figure 1. Personal vote index limits and values

Page 42-43, line 19

Though it is theoretically sound to expect that closed list systems are distinct from others when it comes to the personal vote, this kind of operationalization produces an index that creates overlapping areas between the theoretically possible minimum and maximum values for all electoral systems combined. This overlap in the scale is not an issue in using the PV measure as a variable, if one bears in mind that it exists.
